SMCD is its people, an excellence array of young and senior talent. We take client's goals and need for strategic design and seamless delivery seriously, connecting our entire team to leverage its creativity, knowledge and experience.

Organization Chart

General Contractor

We provide general contracting service, by bringing together the resources, expertise, skilled labors, we ensure that every project is achieved our common goal, that is to exceed our client's expectations. Our good relationships with our subcontractors and partners enable us to possess the huge bargaining power, while not sacrificing the quality and efficiency of works. Our general contract services are allowed for construction, site management, subcontractor management, quality control for construction works, detailed project status report.

Design & Consultant

Combining local and international market knowledge with technical expertise, our architects, interior designers and engineers approach a creative, sustainable and holistic design which from the outset, embraces low-carbon and economic operational performance. Our professional teams strive to deliver visionary buildings that maximize naturally occurring energy and minimize waste.

Design & Build

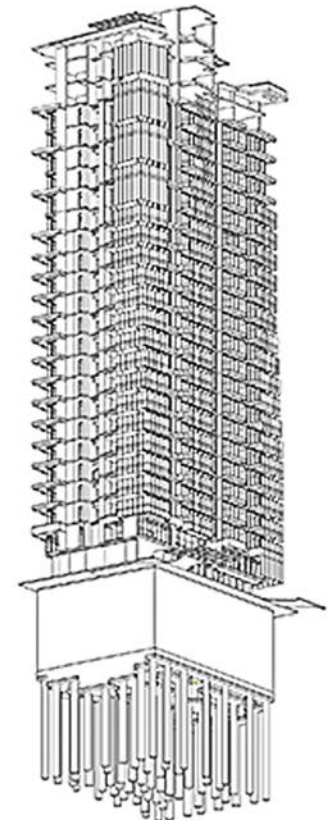

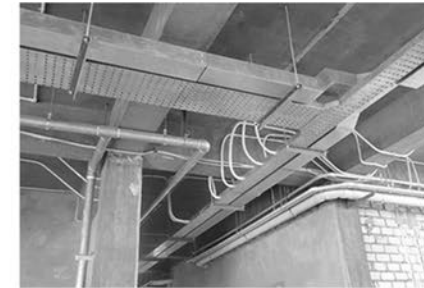

Within our experience, resources and management, we are capable to handle the project by one entity of both design and construction project. We encourage this method of project delivery to the clients for the relationship in one "team" concept between designer and contractor would make the construction run smoother. Other certain advantages of Design & Build are the saving significant amounts of time and money, projects can be designed and built quicker and in a more cost effective manner, budgets, procurement of materials, and scheduling can begin before the final design work and documents are completed, owners can have more input into the design and construction phase of the project, timely informed construction decisions are always forthcoming.

Construction Project Management

To generate the most efficient procedures for project control, minimizing any project disruptions, our services expand for the project management taking care of your construction project runs smoothly and within the plan, by establishing a clear line of authority of site control, safety management, document control, contract management, quality control. The Supervision of inspection on testing and materials, analyze and check on the progress claim from contractor & subcontractor, the assurance of compliance with design intent, interactions on behalf of owner with the contractor, coordination the design and engineering teams are also under our scope.

BIM (Building Information Modeling) Services

To minimize the disruptions during construction process that impact on project schedule and costing, we introduce the client for having an advanced technology from the first start. Our whole team is officially completed training on BIM and diligently provide this service for drawings, 3Ds visualizer, clash detection, quantity control, project schedule and facility management.
